

product data sheet

Documentum WebXtender

Highlights

- Enables collaboration and sharing of information with remote employees, business partners, and suppliers
- Allows users to view and manage documents and other content through a standard Web browser, just as you would on traditional workstations
- Provides a full range of content search and display capabilities including index searches, full-text search, and document property searching
- Contains an extensive security model based on authorized user privileges
- Allows annotation, check-in/check-out capabilities, and version tracking

Browser Client Access for ApplicationXtender

No matter how much data you have stored or how good it may be, it is not useful as business information unless users can readily find, retrieve, and apply it as needed. The Internet and other new technologies are inundating organizations with far greater quantities and varieties of data than ever before. The need for 24x7 access to information has become essential in allowing globally distributed work forces to collaborate on documents from remote locations.

Leveraging the Internet to Provide 24x7 Access to Content

WebXtender helps you share and leverage your corporate data assets, giving users and business partners the ability to retrieve and use data whenever they need it most. As an integral part of the ApplicationXtender family of content management solutions, WebXtender delivers immediate access to stored data via the Internet or a corporate intranet or extranet using a standard Web browser. Providing both interactive and read-only Web clients for Documentum ApplicationXtender, WebXtender allows organizations to enable online collaboration as well as e-business and e-commerce activities.

Content Delivery Over the Web

- Enables collaboration and sharing of information with remote employees, business partners, and suppliers in e-business applications, as well as enabling e-commerce activities
- Provides electronic presentation of information including scanned images, reports, forms, word processing documents, spreadsheets, and many other types of data
- Configurable screen view for regular or expert users, as well as customizable pages to design the WebXtender environment to meet the specific needs of your enterprise
- Printer-friendly viewing for read-only or interactive client

Comprehensive Content Display, Retrieval, and Processing

- Actively involve remote users in collaboration and management of mission-critical business information
- View and manage documents and other content through a standard Web browser, just as you would on traditional workstations

- Provides a full range of content search and display capabilities including index searches, wildcard and range searches, full-text search, cross-application queries, and document property searching
- Allows annotation and redaction of content to provide or hide information, including complete check-in/check-out capabilities and revision history tracking

Secure Access, Easy Deployment

- The server-based WebXtender architecture eliminates the need to deploy software on user desktops
- Contains an extensive security model that provides access to the system, specific content, and the ability to perform specific functions based on authorized user privileges
- Security can be integrated with Microsoft Active Directory Services for single sign-on and ease of administration
- Scalable to thousands of users across multiple WebXtender servers

About Documentum

Documentum, a division of EMC, provides enterprise content management solutions that enable organizations to unite teams, content, and associated business processes. Documentum's integrated set of content, compliance, and collaboration solutions support the way people work, from initial discussion and planning through design, production, marketing, sales, service, and corporate administration. With a single platform, Documentum enables people to collaboratively create, manage, deliver, and archive the content that drives business operations, from documents and discussions to e-mail, Web pages, records, and rich media. The Documentum platform makes it possible for companies to distribute all of this content in multiple languages, across internal and external systems, applications, and user communities. As a result, Documentum customers, which include thousands of the world's most successful organizations, harness corporate knowledge, accelerate time to market, increase customer satisfaction, enhance supply chain efficiencies, and reduce operating costs, improving their overall competitive advantage.
